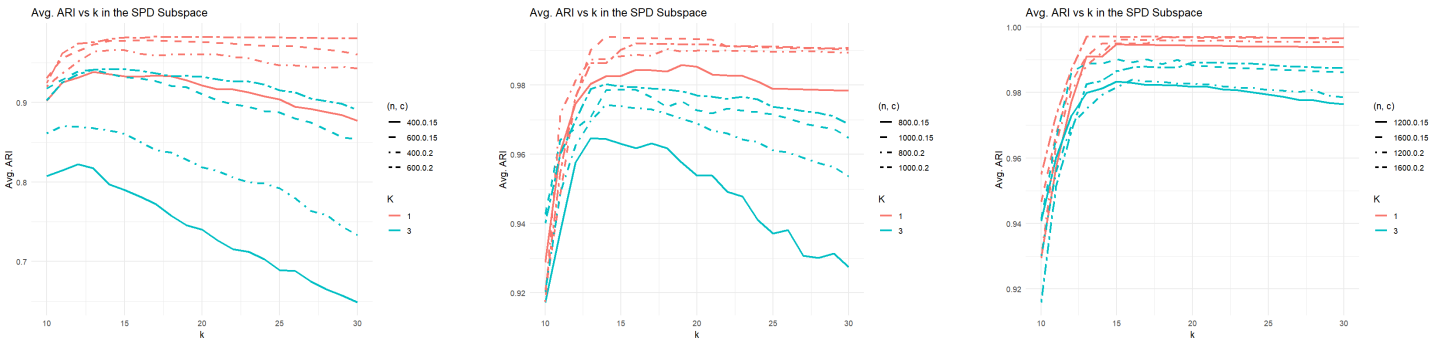
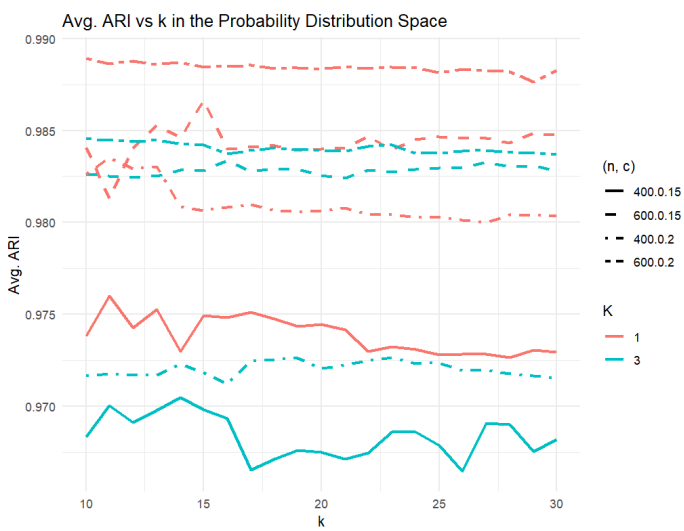
Sensitivity Analysis with Respect to the Choice of k




This PDF contains eight figures illustrating the sensitivity of the proposed IF-CPD to the choice of k. Specifically, the figures are organized into two categories: Subspace settings (6 figures): For each of the two subspace scenarios (SPD subspace and probability distributional subspace), we provide three figures. Each figure corresponds to a pair of sample sizes, namely n = (400,600), (800,1000), (1200,1600); Full space settings (2 figures): For each of the two full-space scenarios (SPD space and probability distributional space), we provide one figure corresponding to sample sizes n = (400,600).
